Note: This API call is for DOS and Win16 personality only. Use Family API for portability.

2018/09/07 05:04 · prokushev · 0 Comments

Int 21H, AH=06H

Version

1 and higher

Brief

DIRECT CONSOLE OUTPUT/INPUT

Family API

DosWrite DosRead

Input

```
AH = 06h
DL = output character (except FFh)
DL = FFh - input character
```

Return

On output:

```
AL = character output (despite official docs which state nothing is
returned) (at least DOS 2.1-7.0)
```

On input:

```
ZF set if no character available
          AL = 00h
```

```
ZF clear if character available
```

```
          AL = character read
```

Notes

does not check ^C/^Break

writes to standard output, which is always the screen under DOS 1.x, but may be redirected under DOS 2+

if the returned character is 00h, the user pressed a key with an extended keycode, which will be returned by the next call of this function

this function reads from standard input, which is always the keyboard under DOS 1.x, but may be redirected under DOS 2+

although the return of AL=00h when no characters are available is not documented, some programs rely on this behavior
