

[Q]: Netware's automagical login

[A]: Egons Bush (2:5100/8)

Есть еще один чуть кривоватый способ, но за то не надо все конфигурировать :)

=====

```
/ LOGINPW - Login to netware with supplied password /* Syntax: LOGINPW userid password */
/* or LOGINPW server\userid password */
```

```
Trace off arg UserId Password . call APMT_INIT
```

```
rc = START_PROGRAM("LOGIN.EXE", UserId) rc = SELECT_WINDOW("LOGIN.EXE",15) if rc <> 0 then
call ErrMsg 'OS/2 Window cannot be found'
```

```
search1 = 'ENTER YOUR PASSWORD:' call WaitForString search1 if pos(search1, LastLine) > 0 then do
```

```
rc = KEYBOARD(Password)
rc = KEYBOARD('ENTER')
end
```

```
else call ErrMsg 'Password prompt could not be found'
```

```
APMT_CLOSE: rc = END_SESSION(); call DropFunc exit
```

```
/**/ WaitForString:
```

```
arg waitstring
MaxTimes = 15 /* times to retry checking for string */
WaitTime = 2 * 1000 /* delay between checks of screen */
call get_LastLine
do i = 1 to MaxTimes while pos(waitstring, LastLine) = 0
rc = WAIT(waittime)
call get_LastLine
end
return
```

```
get_LastLine:
```

```
rc = SYSMENU_SELECT("Copy All")
if rc > 0 then
call ErrMsg "This window doesn't have a 'Copy All' menu item"
```

```
if QUERY_CLIPBOARD_TEXT("clip") = 0 then do
LastLine = ""
do i = clip.0 to 1 by -1 until LastLine <> ""
if (length(clip.i) > 1)
then parse upper var clip.i LastLine
end
end
else call ErrMsg "Query Clipboard failed"
```

```
return
```

ErrMsg:

```
parse arg ErrStr  
say ErrStr  
rc = END_SESSION();
```

errorexit:

```
call DropFUNC  
exit
```

DropFUNC:

```
call APMTDropFuncs;  
call rxfuncdrop(APMTDropFuncs)  
return
```

APMT_INIT:

```
signal on error name errexit  
call rxfuncadd 'APMTLoadFuncs', 'apmtext', 'APMTLoadFuncs'  
call APMTLoadFuncs;  
rc = INIT_SESSION();  
if rc \= 0 then do  
    say apmtmsg  
    signal errexit  
end  
signal on halt name APMT_CLOSE  
return
```

=====

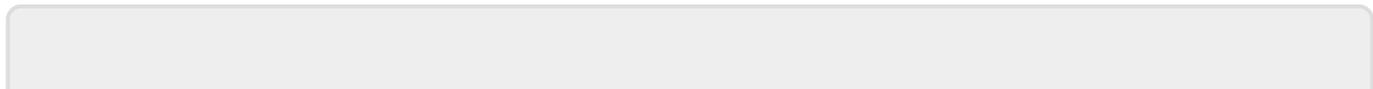

ему нужен APMTST (IBMEWS). freq: APMTST.ZIP, 190K.

Egons, Team OS/2

ps: не я автор этого .cmd.

[A]: Alex Porollo (2:5052/5)

В wps расширителе nice/2 v5.0 реализован более интересный способ. Например можно отследить поля ввода имени пользователя и пароля в nwtools и в случае удачного логина запустить cmd-шник с logon-ом в мелкомягкую сеть с подставление по желанию имени пользователя и пароля. Так сейчас и живем.
