l_ms_os2.zip

What is "l_ms_os2.zip"?

The file "l_ms_os2.zip" contains a replacement mouse driver ("mouse.sys") for the Dell/Logitech Dovebar SR14 3.0 version mouse. It also works for my Logitech MouseMan Sensa three-button mouse under OS/2 3.0 ("Warp"). It might also work for other recent Logitech mice that confuse OS/2. Please let me know of your experiences, positive or negative.

This driver appears to have been written for a version of OS/2 prior to OS/2 3.0. The "readme" file accompanying it when I retrieved it from the OS/2 Shareware BBS (+1 703 385 4325, USA) did not fit OS/2 3.0. Therefore, I added this text, which applies to OS/2 3.0. The original "readme" text is appended to this file for the benefit of OS/2 2.x users.

That's all I know about "l_ms_os2.zip".

Problem solved by this mouse driver

The problems I experienced were the same regardless of which mouse driver I selected during installation of OS/2 3.0. I tried the default driver and both of the Logitech drivers. The problem was that my computer would stop responding to the right mouse button, or all the buttons, or all mouse and keyboard buttons (system crash).

This driver does not enable the third (middle) button. It just allows the mouse to work as a two-button mouse.

Contents of zip file

The file "l_ms_os2.zip" unzips to "mouse.sys", "readme" and "mouse.ddp". "mouse.sys" is the

replacement mouse driver. "readme" is what you're reading right now. I don't know what "mouse.ddp" is for, but it's probably for an earlier version of OS/2. It is not needed for OS/2 3.0, but it's included for the benefit of OS/2 2.x users.

От себя хочу добавить что драйвер отлично работает и с мерлином .

P.S. Наконец-то решилась моя поледняя драйверная трабла :)
